RMSD as function of sequence identity

Estimated value of the parameters a and b, slope a:−0.0188, intercept b on y axis: 2.31
95% confidence interval for a (±0.003) and b (±0.189)
R−squared (R^2): 0.42

RMSD between structural model and its associated structure

Sequence identity between the query and template
If more than one template are selected, the best sequence identity is plotted
